

With Pace, it's personal.™

A DIVISION OF GATEWAY MECHANICAL SERVICES INC.

Company Profile

PACE Industrial Inc. specializes in the **Sport and Recreational Ice** industry. Our expertise is in the design, manufacture, construction, installation, and service of artificial ice refrigeration plants and rink floors.

Our focus is to provide energy efficient, durable, and serviceable systems that will produce the absolute best quality ice available! To ensure high quality workmanship, our staff consists of specialists in the refrigeration, electrical, and welding trades.

With 40 years in the business and hundreds of completed projects, we have grown from a basic refrigeration service company to a world leader in the artificial ice industry.

PAGE 2

COMPANY PROFILE

Advisory and Consulting Services are part of the package we offer. Each project receives individual design consideration to best suit its specific purpose.

Our projects have ranged from small two sheet curling rinks, commercial multi rink facilities, large multi purpose arenas, to the Winter Olympic Games. Other projects include ice plants powered by natural gas engines, ground freezing units for construction in unstable soil conditions, and numerous other specialty projects. After-sales service is important, and at present we service many rinks throughout North America.

We have extensive involvement in the U.S. Market, having rink projects in New Hampshire, Illinois, Tennessee, West Virginia, Georgia, North Carolina, Pennsylvania, New York, Michigan, Indiana, Missouri, Texas, New Mexico, Utah, Wyoming, Wisconsin, California, Ohio, Colorado, Oklahoma, Iowa, Idaho, Alabama, Kentucky, Washington, and Nevada. **PACE** also has completed projects in Canada, New Zealand, Scotland, Japan and Russia.

PACE's parent is **Vector Industries Inc.** of Edmonton, a 40 year old company which is one of the largest refrigeration companies in Canada. Companies in the Vector group are engaged in other aspects of the refrigeration business including HVAC, Supermarket Refrigeration, Industrial Refrigeration, and Refrigeration for Natural Gas Processing. **PACE's** affiliation provides access to technical expertise and capabilities in these other aspects when required, while allowing **PACE** to maintain it's focus on Recreational Ice Refrigeration. The Vector affiliation also brings increased stability and financial strength.

With Pace, it's personal.™

ADVISORY AND CONSULTING SERVICES -

- Conceptual Planning of new facilities to meet the specific requirements of the market, while maintaining the highest standards of ice quality, energy efficiency and project budgets.

ARTIFICIAL ICE REFRIGERATION SYSTEMS -

- Industrial duty refrigeration plant of any type or size complete with:
 - Environmentally friendly products
 - Industry leading components and design.
 - Electrical System and Controls.
 - Operating and Maintenance instructions.
 - Detection and Safety Equipment.
 - Computerized Control System.

ICE RINK FLOOR SYSTEMS -

- Concrete or Sand Ice Rink Floor System and Accessories.
- Cooling and Under Floor Heating Systems.
- Sand Bedding and Floor Insulation.
- Installation supervision and support.
- Design and Drawings for Construction by the Owner, including:
 - Header Pipe Trenches.
 - Dashboard Base and Supports.
 - Shaved Ice Melting Pit.

HEAT RECOVERY & ENERGY SYSTEMS -

- Waste Heat Recovery for:
 - Under Floor Heating.
 - Shaved Ice Melting Coil.
 - Potable Water Preheat.
- Dehumidification.
- Low Emissivity Ceiling for Ice Rink.
- Infrared Ice Temperature Monitoring and Control.
- Demineralized Ice Flooding Water System.
- Ice Banks for Building Air Conditioning

With Pace, it's personal.™

Unique Projects Completed

- Engineered and installation of rink floor and sloping curved ice pathway for the movie set, **“Mystery Alaska”**, a Walt Disney production. Pace received a call on a Friday, indicating the unexpected warm weather had melted the natural ice surfaces on a movie set in Canmore, Alberta, bringing shooting to a halt. Our personnel were on site Monday, and had a system in place allowing shooting to start again within 10 days. We utilized a large portable ammonia system (280 Tons) built by Pace for this type of mobile, temporary application. Pace was also involved with building special effects props for the “Batman – Mr. Freeze” movie.
- Designed and installed a temporary 60’ x 160’ ice surface on the roof of two story connecting portion of New York World Trade Center.
- Were instrumental in the development of frozen conductor pipes to prevent "thaw back" under drilling rigs in the Delta portion of the Arctic exploration program. These refrigerated conductors have become standard equipment for production wells in the Arctic.
- Developed freezing points to stabilize "Quick Sand" conditions to allow deep sewer construction in municipalities with problem soil conditions.
- Developed a frozen pad to enable construction of an overpass for a new freeway system, and support pads for large cranes.
- Designed and built the largest portable ice rink refrigeration system in the world. It is contained in a 52' highway trailer with a capacity of 280 Tons (at 76°F WB & 10°F SST). This unit is owned by Los Tres Papagayos of Los Angeles and will be used for the second time by the NHL for the first two regular season games in 2000 in Tokyo, Japan on a 90' by 200' temporary ice sheet.
- Engineered and installed a complete artificial ice system where 3 phase electric power was not available. Natural gas engine was used to drive the compressor and pumps from a common shaft. This allowed a small northern community to have an ice rink, which otherwise would not have been able to.
